

Cloud Proven offered Franciscan Health Mooresville Surgery Center intrusion detection and data loss prevention as part of their hosting. **We knew our patient records would be secure** and maintained in compliance with HIPAA.

– Keith J., SVP

IS YOUR INFORMATION SYSTEM AND DATA SAFE? SOLUTION FOR MEDICAL PRACTICES

THE CHALLENGE

Your hospital is bound by the same data security regulations as a 1,000 bed hospital, but with fewer resources to comply with these regulations. Technology expertise is limited. New threats continue to emerge as patient care and business applications could proliferate your operating environment. Ransomware attacks on hospitals have spiked with budget constraints and talent retention making it more difficult to prevent and respond to rapidly evolving cyber threats.

- Ransomware
- Hardware failures
- Phishing scams
- Flood/Fire/Natural disasters
- Hacking
- Software vulnerabilities

IMPACTS OF CYBER ATTACKS

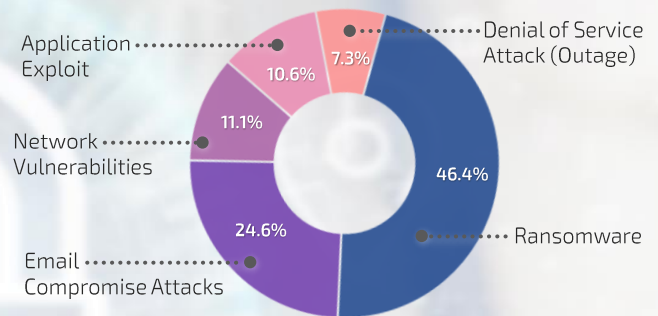

- In 2021, the average cost to recover from ransomware attacks was \$1.85 million
- Compromise in patient care
- Negative perception from media announcement
- Could prevent ability for future cyber insurance coverage
- Long term cost of credit monitoring

Cloud Proven **mitigated the threat immediately** before the vulnerability would go on to gain attention and exploitation.

– Jim S., Beck Analytical Services

CYBER ATTACKS

Cyber attacks in healthcare are up 300% in the last 2 years.

OUR SOLUTION

In the healthcare technology field, you have to assure customers that you can protect their data and meet HIPAA regulations. A strong **private cloud** strategy can help reduce risk. Storing critical data in the cloud can leverage state-of-the-art cybersecurity solutions that you might not otherwise be able to afford. Cloud Proven Networks offers both HIPAA and PCI compliance-ready solutions with data security, support, and reliability built-in as a **standard** in all our products.

Our solution results in:

- Business continuity, full offsite recovery capability
- A secure PRIVATE platform for your data
- Proactive intrusion prevention
- Drastic reduction in capital expenditures
- Risk reduction through mitigating threats and vulnerabilities
- Faster, more efficient healthcare compliance audits
- Ability to scale quickly
- Peace of mind knowing you have options
